

Introduction to Docker Publishing

Docker registries

Pre-built Docker images can be shared in Docker registries

One popular registry is Docker Hub (hub.docker.com)

You can search for and use public images

Search for great content (e.g., mysql)

Pro tip

You can push a new image to this repository using the CLI

```
docker tag local-image:tagname new-repo:tagname
docker push new-repo:tagname
```

Make sure to change *tagname* with your desired image repository tag.

Private Docker registries

Individuals, teams, corporations may not want to use a third-party online service

Instead of using an online Docker repository like Docker Hub, it is possible to create a private registry that can be shared via an internal server
